PROFESSIONAL SUMMARY

Program Manager with 7+ years of experience delivering complex engineering and product programs across global technology companies including LinkedIn and Amazon. Proven ability to manage multiple concurrent programs, cross-team dependencies, and release milestones while aligning engineering execution with business objectives. Experienced in Agile delivery, SDLC, automation initiatives, and data-driven decision making. Strong track record driving process improvements, stakeholder alignment, and operational scalability across distributed teams. Familiar with GenAI systems including LLM-powered workflow automation and knowledge retrieval solutions.

CORE SKILLS

Program & Technical Program Management, Agile / Scrum / Kanban, Software Development Lifecycle (SDLC), Cross-Functional Leadership, Advertising, Project Scheduling & Release Planning, Dependency & Critical Path Management, Stakeholder Management, Risk Mitigation & Issue Resolution, Process Optimization & Automation, Data-Driven Decision Making.

Tools: Jira, Asana, MS Project, Smartsheet, Confluence, Google Workspace, MS Office

AI & Automation: LLM-powered workflow automation, internal AI tooling, knowledge retrieval systems

PROFESSIONAL EXPERIENCE

LinkedIn

Program Manager III

July 2025 – March 2026

- Own end-to-end program execution, aligning product, engineering, and operations stakeholders to deliver tooling improvements aligned with broader organizational goals.
- Identify and manage cross-team dependencies and critical delivery paths, ensuring engineering deliverables remain aligned with product roadmaps and release timelines.
- Designed LLM-powered automation workflows that streamlined internal tooling operations, reducing manual support overhead and improving operational efficiency.
- Built a Slack-integrated AI support system enabling automated knowledge retrieval, reducing average issue resolution time from ~4 hours to under 5 minutes.
- Implemented a centralized Jira intake and prioritization framework to track issues, dependencies, and risks across engineering teams, improving operational visibility.
- Conduct program health reviews, risk assessments, and executive status reporting, proactively escalating risks and enabling faster cross-team decision making.
- Collaborate with globally distributed teams across engineering, editorial, and product organizations to coordinate program execution and drive delivery outcomes.

Amazon

Program Manager

September 2018 – June 2025

- Delivered multiple cross-functional engineering and operations programs simultaneously, coordinating product, engineering, and operations teams while maintaining a 95% on-time project completion rate.
- Partnered with Data Science and Engineering teams to build and launch data-driven Sponsored Ads solutions, including bid optimization and relevance ranking models, improving advertiser ROI by 12% and campaign conversion rates by 9%.
- Led Agile program execution, managing project schedules, scope changes and cross-team dependencies across distributed teams.
- Led cross-functional collaboration across Product, Engineering, Analytics, and Business teams to deliver high-impact advertising solutions in a fast-paced environment.
- Developed automated dashboards and reporting frameworks that improved leadership visibility into program health, enabling data-driven decision making.
- Implemented risk mitigation frameworks reducing potential project risks by 87%, ensuring stable delivery of high-volume operational programs.
- Managed enterprise SaaS implementation programs, aligning product capabilities with client requirements and coordinating successful customer deployments.
- Directed a team of 12+ members, setting performance goals, managing workloads, and improving team productivity by 15%.
- Led the launch of Amazon Sponsored Ads across 6 international locales, coordinating UAT testing, operational readiness, and rollout execution.
- Transformed content moderation workflows using automation and labelling models, improving moderation accuracy by 35%.
- Increased automation coverage by 4.7% month-over-month by implementing flexible keyword-based moderation models.

EDUCATION

Bachelor of Technology — Mechanical Engineering

Maulana Abul Kalam Azad University of Technology | Kolkata, India
