Professional Summary

Engineering Program Manager with 7+ years of experience leading enterprise-scale engineering programs across Amazon and LinkedIn. Expertise in AI-assisted program management, Agile delivery, SDLC, release governance, global product launches, cloud-enabled platforms and machine learning products. Regularly leverage Generative AI to accelerate project planning, executive communication, dependency mapping, documentation, risk identification and reporting, improving delivery speed and decision quality. Proven track record of driving cross-functional execution, operational excellence and measurable business outcomes.

Core Competencies

Engineering Program Management • AI-assisted Program Management • Technical Program Management • Agile • Scrum • SDLC • Release Governance • Global Product Delivery • Cross-functional Leadership • Executive Stakeholder Management • RAID Management • Risk Mitigation • KPI Dashboards • AI Automation • Machine Learning Programs • Cloud Platform Programs

Professional Experience

LinkedIn (via Akraya) | Program Manager III | Jul 2025 – Mar 2026

- Led end-to-end delivery of enterprise engineering initiatives across Product, Engineering, Security, IT, Editorial and Operations teams.
- Developed integrated project plans spanning 20+ cross-functional stakeholders, reducing planning effort using AI-assisted planning, documentation and status reporting.
- Built an LLM-powered enterprise support platform integrating Slack and internal knowledge systems, reducing average issue resolution time from 4 hours to under 5 minutes (98% improvement).
- Directed recovery of a critical Sales Navigator platform migration by coordinating Engineering, Security and IT teams, ensuring business continuity with zero operational disruption.
- Implemented centralized Jira intake, prioritization and delivery governance improving engineering visibility and execution predictability.
- Leveraged Generative AI to accelerate project planning, executive communications, meeting summaries, documentation, dependency analysis and RAID tracking, enabling faster decision-making and reducing repetitive administrative work.
- Presented executive dashboards, KPIs and program health reviews to senior leadership, enabling faster prioritization and more predictable release execution.

Amazon | Program Manager | Sep 2018 – Jun 2025

- Led enterprise engineering programs supporting 30M+ Sponsored Ads reviewed weekly across Amazon's global advertising platform, partnering with Product, Engineering, Data Science and Operations teams.

- Led cross-functional delivery of machine learning-powered advertising initiatives, coordinating engineering roadmaps, sprint execution, release readiness and production deployments.
- Directed global rollout of Sponsored Ads capabilities across six international marketplaces, managing UAT, operational readiness, stakeholder communication and launch governance.
- Supported delivery of machine learning-powered advertising capabilities that contributed to a 12% improvement in advertiser ROI and a 9% increase in campaign conversion rates.
- Led migration from rule-based moderation to machine learning-driven moderation workflows, improving moderation accuracy by 35% while increasing automation and reducing manual review effort.
- Established program governance through RAID management, dependency tracking, executive escalations and release reviews, enabling predictable delivery across multiple engineering programs.
- Facilitated Agile delivery across multiple engineering teams through sprint planning, backlog refinement and release planning, improving cross-team collaboration and execution visibility.
- Managed and mentored a team of 12+ specialists, driving KPI reviews, coaching and continuous process improvements that enhanced operational consistency and delivery quality.
